

# Parking lot and garage Security Surveillance Application

## IP cameras enhanced parking lot security

Many of the criminal acts at shopping malls, business offices and hospitals occur in the parking lot. When the customers come into the parking lot, they need to feel safe and have confident that their cars won't be stolen or vandalized. If you are an administrator of a parking lot, the security of your parking lot is extremely important for you. Thinking about if any destructive events happened in your parking lot, business may face the risk of losing the clients. An effective surveillance system will preclude the possibility of steal and vandalism efficiently.

LanBit provides the IP surveillance system which is able to observe activity, inspect vehicles from the entrances and exits, observe illegal attempts, and detect intruders in the protected area. The IP cameras capture every detail images and the images can be immediately viewed from any PCs in the central room through the existing network cable, no coaxial cable or other equipment requested. IP surveillance system enable remote-monitoring from any computer which network connected, the IP cameras which support two-way audio also allow you to hear and speak with visitors or intruders in real time through the network from remote locations. This powerful technology of IP surveillance system is an efficient flexible solution for enhancing your parking lot security.
