

# Retails Security Surveillance Application

## Enhance your security surveillance system for your retail outlets

To run a successful retail business, you have to create a secure environment and consider how to protect your customers, your employees and your store. To protect your merchandise and avoid the losses from shoplifting, employee fraud and collusion, cash fraud, you need an effectively security surveillance system.

An efficient surveillance system enables you to see the complete video image of all the events. Utilizing the information you have, it is very easy to address security threats and reduce loss.

LanBit develops network security surveillance system and software, offers a wide variety of retail security solutions which already being used in stores around the world. The IP network surveillance solution with worldwide support and service for retail from LanBit can help you to improve the operations of your security personnel and enhance your security systems.

## Build conveniences and efficiencies across your security system

The administrator is able to monitor all store locations remotely from virtually any location with network connection. IP network cameras can be used to view, record and measure customer behavior, stock condition and employee's work efficiencies. The build-in motion detection system can

send images of an unauthorized invader to you and the police or security agencies when the store closed.

The network surveillance allows you to use your existing analog cameras which already installed in very outlet by connecting to the video server. Instead of VCR or DVR, the hard disks of your PC or the storage server will be used to store the recorded video images, perform rapid and accurate search and retrieval for the recorded video. This solution for retail provides a more complete view of events and creates a safer, security-rich environment for your customers, employees and property.
